

# Flexel™ EMT Flexible Fitting

For EMT

Type FLA

Use:

The Flexel Fitting is an innovative product in which to couple lengths of EMT together or connect EMT to a panel board, junction box, etc., when and where a change of direction is required in the conduit run.

Features:

- Easily hand-bendable from straight tubing to 90° or any angle in between. No need to waste time using cumbersome bending equipment.
- Rigid enough to maintain configuration until manually re-formed.
- Wire pulls through formed bends.
- Specially designed so internal diameter remains unchanged, regardless of the bend configuration.
- Maintains compliance with NEC's minimum radius requirements.
- Can be bent to various degrees, including offset and compound angles.
- Suitable for use indoors or dry locations wherever EMT is used as a raceway.
- Safely conducts the maximum ground fault current required by UL, CSA and the National Electrical Code. No need to pull a separate grounding conductor.

Material/Finish:

Flexible Length: Strip Steel/Galvanized

End Fittings: Steel/Galvanized

Third Party Certification:

UL Listed: E-14895

CSA Certified: LR9795

Applicable Third Party Standards:

UL Standard: 514B

CSA Standard: C22.2 No. 18
